Professional Profile

Most of my journey has been as a solo developer, with just a handful of collaborative experiences. I’ve also explored the no-code era through freelance gigs on Upwork, but in the end I prefer rolling up my sleeves and coding with stacks I know best: Laravel, React, React Native, Go, Node.js.

For me, tech isn’t just about tools — it’s about the thrill of turning rough ideas into something real, something that works.

If the skills are under my belt, I’ll figure out how to build it.

Work Experience

Petalert.fr

French platform for posting lost pet alerts.

- Started as a no-code build (Xano backend + Webflow frontend).
- Pushed no-code beyond its limits with custom tweaks: Facebook API integration + cron-based automations.
- Migrated millions of records from MongoDB to PostgreSQL, ensuring performance and reliability.

A challenge that proved even “simple” no-code tools can scale when you hack them right.

FacelessNiches.com

Platform that constantly analyzes YouTube niches

- First built with no-code (Webflow + Wized + Xano).
- Outgrew the limits → rebuilt with Node.js + a dedicated Linux server.
- Optimized background jobs and API quota management for smooth daily data collection.

Learned how to transition from no-code to full code, cutting costs and massively improving performance.

Translify.net

An online translation service connecting enterprises with real human translators.

- Built the backend in Laravel.
- Offloaded heavy lifting (file uploads) to Go, combining the best of both worlds.
- Used React/Inertia + shadcn/ui for a clean, fast frontend.

A personal experiment in tech mixing — combining stacks to solve real-world bottlenecks.

What I am looking for

- Financial freedom: building projects that fund themselves, so I can focus on scaling without stress.
- Value creation: solving hard problems, crafting profitable solutions, and helping businesses grow.
- Cool collaborations: working with people who are as excited about building as I am.

- In short: I just love building things that actually work — tools, platforms, apps that make life easier (and ideally, make money for me and the people I’m working with).
